Hi Colleagues,

Apologies again for the late notice on the Tuesday meeting this week. The peer reviews are complete for NMP and Methylene Chloride and we can give a short initial report out on these next Tuesday.

As discussed previously, we promised to give everyone time to review the high-priority designation documents for the next 20 chemical that will undergo risk evaluation. As a reminder, these chemicals were proposed as candidate high-priority chemicals back in March of 2019. They have been through two rounds of 90-day public comment periods, and there is a designation document that you can find in the individual chemical dockets that list the initial conditions of use, hazard, and exposure information. The two attached documents will finalize the high-priority designation for these 20 chemicals and we will move to risk evaluation in the new year. Attached you will find the Federal Register Notice announcing this final designation as well as a Response to Comment document that responses to the public comments we received during both of the public comment periods.

Statutorily, we must announce the final designation of these 20 chemicals on December 20<sup>th</sup>, therefore your time to review is unfortunately extremely short. If we could have all comments back to us by **COB on Wednesday December 11, 2019**. We apologize for the short notice, but it has been a race to finish here as the second public comment period finished only a few weeks ago.

Please don't hesitate to reach out with any follow-up questions.

Best,  
Susanna

---
